DivXNetworks and BroadQ Team to Bring DivX™ Video to Sony® PlayStation® 2

Preview Edition of Qcast™ Tuner Software Allows Playback of DivX™ Video at Certain Resolutions on Popular PlayStation 2

September 16, 2002--San Diego, CA and Austin, TX—DivXNetworks, Inc, the company that created the revolutionary patent-pending DivX™ video compression technology, and BroadQ LLC, a software company developing innovative solutions for communicating digital content, today announced that the new QCast Tuner software from BroadQ is capable of playing back DivX video on the Sony PlayStation 2® gaming console. With the Qcast Tuner Preview Edition released today, consumers can play back videos encoded in all versions (5.xx and earlier) of DivX video at resolutions of 720x320 and below.

Additionally, the two companies have signed a strategic marketing agreement and plan to work together to integrate playback support for advanced DivX video features at higher resolutions in future versions of QCast Tuner software. With over 60 million global users, the revolutionary patent-pending DivX video compression technology offers DVD-quality video at sizes 7-10 times smaller than MPEG-2 and ranks among the world's most popular and fastest growing video technologies.

QCast Tuner is a home entertainment software product for the Sony PlayStation 2. The first practical, easy-to-use solution that provides home entertainment systems with remote access to computer based music, video, images or other digital content, QCast Tuner software brings the power and excitement of vast world of digital media to the living room with the touch of a button on a remote control. In addition to DivX compatibility, the Qcast Tuner software provides playback support for MP3 audio, and MPEG-1 and MPEG-2 video formats.

“We are very excited to be working with DivX Networks, and their patent-pending DivX video technology enables us to deliver an exceptional DVD-like quality with our QCast Tuner Software,” said Stacy Cook, president and CEO of BroadQ. “The combination of the audio/video capabilities of the Sony PlayStation 2 coupled with our innovative

software and the DivX video technology creates an all-in-one, true cinematic home entertainment experience completely unlike anything available today.”

“The QCast Tuner is a very cool convergence application that will help empower DivX users everywhere to bring their DivX videos beyond the PC,” said Jerome Rota, DivX creator and co-founder of DivXNetworks, Inc. (www.divxnetworks.com). “The global community of DivX users has been clamoring for versatile multimedia products that are compatible with DivX Video, and the preview edition of QCast Tuner certainly fits that bill. We look forward to working closely with BroadQ to bring even greater DivX compatibility to future versions of the product.”
